

Important instructions regarding gas service:

Shut Off: Gas Company requires the Fumigator to schedule the shut off.

Turn On: Scheduling the restoration of gas service is the customers responsibility and should be done on the first day of the fumigation.

- All Items for human consumption (such as foods, beverages, drugs and medicines), which are not intact in the original manufacturer's airtight containers (such as sealed glass or metal), must be removed from the structure prior to fumigation or double bagged in Nylofume* bags.
- Food inside refrigerators and freezers must also be placed in Nylofume bags as mentioned above.
- Remove all mattresses and pillows with waterproof covers, such as "can't wet" mattresses for infants and sickrooms, or remove the covers.
- Shut off automatic switch controls for appliances and lighting systems that will be included in the space to be fumigated.
- All people must leave, and all living things (such as pets, fish aquariums and growing plants) must be removed from the building before the fumigation begins.
- All obstructive articles, such as antenna guide wires, satellite dishes or weather vanes, must be removed. The company cannot be responsible for changes in the TV reception after the fumigation is completed.
- Cut back shrubbery and tree branches to prevent damage. Allow enough space for the tent to fall freely to the ground. Tree limbs growing over the roof must be trimmed back. Thoroughly water the ground around shrubs and plants located adjacent to the structure.
- All heating elements must be unplugged (heaters, electric pianos, organs, etc.).
- All cabinets, drawers, closets, and interior doors must be opened. Raised blinds, open drapes and attic vents.
- Electricity must be available, as it will be required to run fans during the fumigation period.
- Notify Bug Central prior to the fumigation if any conduits, tunnels, pathways, etc., are connecting the building to be fumigated to any other structure.
- The law requires that all buildings be locked during a fumigation. In addition, all buildings shall have a secondary lock on all exterior doors during the fumigation. It is most important that you make key arrangements with the company representative conducting the fumigation.

The company will exercise due care in its fumigation procedures, but will not be responsible for broken roof tiles, gutters, solar heaters, foliage or other inadvertent damage caused by properly performed procedures.

During the fumigation and aeration procedure, the company will not be held responsible for vandalism, theft or breaking and entering.
